## PROJECTS

Project Name: Automatic room light controller using microcontroller

Role: Project Member

Team Size: 4

Project Duration: 1 Month

Project Detail

The aim of this project is to automatically turn on or off the lights in a room by detecting the human movement. We implemented this project using 8051 Microcontroller and two Infrared (IR) sensors. Since the job of the circuit is to turn on the light when someone enters the room and turn off the light when the last person leaves the room, the project has to internally count the number of visitors entering and leaving the room. Hence, the project acts as an Automatic Room Lighting System
