PROJECTS

CityLine Mobile (Flutter)

- The objective of the project was to create a system for CityLine Mobile that allows users to monitor the status of installations. This system includes features such as Communications, Networking and Connectivity, and integration with Google Maps.

- The inclusion of List, Map, and Chart formats gives users the flexibility to choose from multiple options when viewing installation statuses..

- google play Store - https://play.google.com/store/apps/details?id=com.hectronic.parkingapp&pcamp aignid=web_share

SareeWaale (E-Commerce using flutter)

- The objective of the SareeWaale initiative was to create a prominent e-commerce platform that caters exclusively to the fashion and lifestyle requirements of customers in Bihar and across India. Here is a detailed overview of the different components of this project.

- Worked on develoment of platform's features, services, and overall customer experience. UI designing, product browsing , product detail , product search functionalities, point of sale with Secure payment Gateway

- google play Store - https://play.google.com/store/apps/details?id=com.ecomapp.ecom_app

Logistic App (Flutter)

- Yaantra logistic application has been introduced to offer additional support to our team members, enabling them to purchase refurbished, unboxed, and pre-owned Smartphones from various brands in large quantities.

- This application offers users the convenience of buying products and enjoying a seamless transaction process, all from the comfort of their own locations.

PhoneCash -Sell Your Old Phone(Android -Java)

- PhoneCash is a mobile application that allows users to easily sell their pre-owned smartphones. Through a quick and straightforward process, the app conducts a smart diagnosis to determine the health score of the device. Based on this score, PhoneCash automatically presents the user with the most competitive price for their smartphone.

- Developed functionalities such as location tracking, social media login, system structures, app communication, network capabilities, and integration with Google Maps.
