PROJECTS

WEB DEVELOPMENT

Usbot.shop - python Django web app
Live server : www.usbot.shop

Usbot is an e-commerce platform for personalized bottle sales. Its UI is meticulously designed in Figma, backed by SQL and PostgreSQL databases via drawsql. The tech stack includes Python, Django, HTML, CSS, Tailwind CSS, and JavaScript for interactivity with Ajax for asynchronous server communication. Chart.js handles data visualization. Hosted on AWS EC2 instances with Nginx, it ensures seamless performance. All housed within a well-organized GitHub repo for efficient collaboration and version control.
